Problem Statment

In today's fast-paced world, a streamlined service is needed that allows users to easily an ambulance, securely store, and transmit medical documents to the hospital, eliminating the need for cumbersome registration processes.

✖ No immediate access to abulance with location tracking

In an emergency, every second counts. The ability to access an ambulance immediately and have it track your precise location can make a significant difference in the outcome of a medical crisis. Yet, many current emergency response systems lack this crucial feature, leading to delays and potentially life-threatening consequences.

No place to store all medical records where hospitals can access

The absence of a centralized system for storing and accessing medical records poses a significant challenge for hospitals. Without quick access to comprehensive patient histories, treatment can be delayed, errors may occur, and critical information might be missed, compromising patient care and outcomes during emergencies.

24,000+

According to research conducted by the RADHEE foundation, over 24000 people die every day in India due to a delay in seeking medical assistance during the first hour. Due to this the first hour has also been attributed the "Golden Hour" for treatment of patients.

Solution

Medical Records Storing Service
AmbuLink provides a system of storage for all medica records, allowing a patient a singular database to access their medical information.

Advanced Ambulance Services
During an emergency situation, AmbuLink can be used to immediately contact a nearby ambulance based on hospital credentials, and also provides both the patient and the ambulance with an advanced map feature, allowing faster geolocation and pick-up facilities.

Instant Transmission of Medical Records
Moving forward in a crisis, AmbuLink instantly updates the registered hospital to which the patient is discharged with their medical records and required forms. This hastens the healing process, as the patient's near family and friends do not need to waste time in hospital registrations.
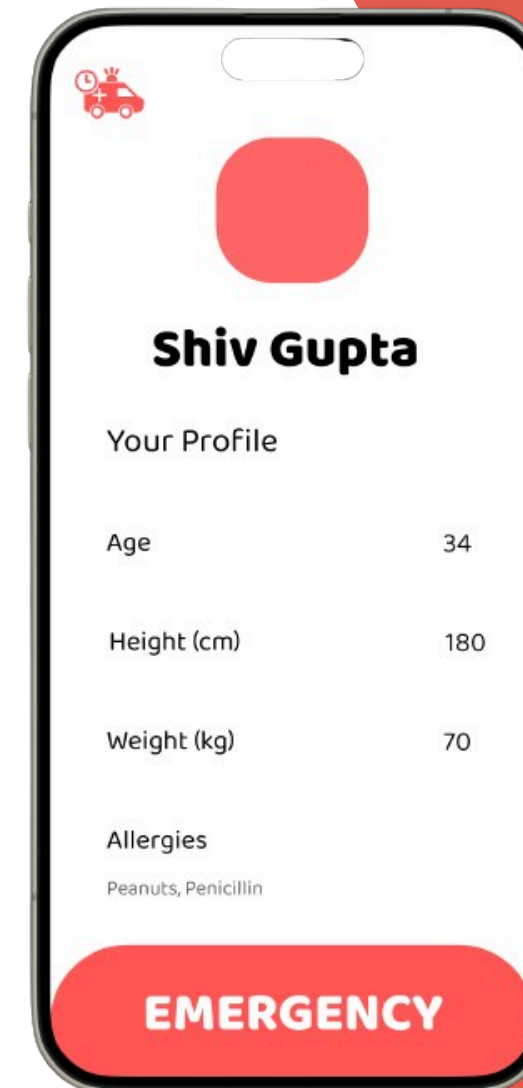

FACILITIES

We pride ourselves on providing a comprehensive range of facilities to enhance the healthcare experience for our patients. Our state-of-the-art facilities include:

- One-Click Emergency Call
- Medical Document Storage
- Real-Time Accurate Tracking
- Automated Dispatch System
- Integration with top hospitals
- Automatic Medical Document transfer
- Reduced paperwork upon arrival.
